ULTRA_PRO InnoTeam
Ultrasonic separation, joining, and sealing technology for creating hybrid composites based on new car body concepts in automated ULTRA-PRO process chains

The overall aim is to develop advanced, technologically ultra-complex, resource- and energy-efficient ultrasonic separation, joining, and sealing technologies in automated assembly process chains for the production of hybrid composites in the automotive industry.

Duration: March 1, 2020 – October 31, 2022

This project is backed by the European Social Fund (ESF) and the Development Bank of Saxony (SAB).
